

Copper Algaecide

For Algae control in pools

Kills and prevents mustard, green and black algae

Algae, while not harmful to bathers, do not belong in a properly operated swimming pool. If allowed to grow freely, the pool quickly becomes unusable. Algae can make your pool water hazy, clog filters, create objectionable odors, increase chlorine demand and reduce effectiveness of other pool chemicals. Using a good algaecide as part of regular pool maintenance is the best way to control these microscopic plants. **Copper algaecide** is a concentrated algaecide formulated using a triple chelation process to hold copper in solution for longer algae control. Copper algaecide stays active longer in the pool and provides extended treatment against mustard and other forms of algae.

BENEFITS

- ✓ **Broad spectrum** – Effective on the toughest mustard, black, yellow and green algae that cling to the walls and bottoms of pools.
- ✓ **Non-foaming** – Unlike the commonly used algaecides, **Copper Algaecide** is specially formulated to be non-foaming, thereby enhancing pool appearance.
- ✓ **pH tolerant** – Is effective in both acidic and alkaline pH ranges, thereby eliminating the need to alter pool chemistry prior to application.
- ✓ **No waiting** – The pool can be used immediately after treatment.
- ✓ **No chlorine demand** – Can be used in pools treated with chlorine chemicals and its use may reduce the amount of chlorine chemicals normally required.
- ✓ **Compatible with all sanitizers** – Is compatible with most chemicals commonly used to treat pools and hence can be used by all customers.
- ✓ **Flexible performance** – Prevents algae growth and eliminates existing algae in pools.
- ✓ **Effective in all parts of the country** – As it does not affect water quality, this product can be used anywhere, regardless of the quality of water.

DIRECTIONS FOR USE

Initial dosage:

- ✓ Two (2) ounces per 5,000 gallons of pool water. See dosage chart on product label.
- ✓ Mix the correct amount of the product with 1 gallon of water and distribute around the edge of the pool. Apply initial treatment dosage to a freshly filled pool or at first visible signs of algae.

Maintenance dosage:

- ✓ One (1) ounce per 5,000 gallons of pool water. See dosage chart on product label.
- ✓ Apply the correct amount of product mixed with 1 gallon of water every two (2) weeks.

AVAILABILITY

Copper Algaecide is available in 1 quart bottles.
